

# Black Safety Clip

**Please use safety clip when mowing very tall brush**

**Safety Ring installation is as follows.**

After connecting both adapters, you will slide the safety clip behind the locking sleeve as shown below, this will help prevent dirt and debris from getting the spring and also prevent the locking sleeve from accidental disconnection by tall brush. The safety clip is made from plastic so it can be easily removed and install without a tool. After disconnecting the adapters, we recommend that you keep the clip on the implement adapter for safe keeping.

Insert plastic collar when in operation to prevent accidental disconnection.
